

Copying VM theme to other template

Posted by Jason Berry - 18 Aug 2012 14:36

I purchased and love the SJ Cars Virtuemart theme... Is there an easy way of carrying over just the virtuemart theme to my own custom template?

I know I would have to copy all from ...template/SJcars/html/com_virtuemart/ to my template. Next css elements for VM through "template.css".. I've gotten this far but there are items not working.

1. The +/- product add on the product details page doesn't show.
2. The "Ask a question about this product" doesn't pop up in a new window is opens in the same window.
3. When adding a product to your cart, the pop-up or modal window doesn't open letting you know the product was added.

I'm lost at this point. What else needs to be transferred?

Any help would be greatly appreciated.

J2.5.6 w/ VM2.0.8e and SJ Cars

Hi Jason Berry,

Could you please send your site url to me?

Thanks
