

vmError: getProductPrices no object given query ti

Posted by tuval gueta - 18 Jul 2012 08:37

Hi, i have installed this extension, and i get an error message:

vmError: getProductPrices no object given query time

for every product the same error message.

also i changed in the vmcoolaccordionreader.php file the line:

```
$product->prices = $calculator->getProductPrices($product->id);
```

to:

```
$product->prices = $calculator->getProductPrices($product);
```

and it didn't help, the error has disappeared but the prices still show "0" in every product.

thank you for your help

Hi tuval gueta,

Please unzip and override the vmcoolaccordionreader.php file to
"modules/mod_sj_vm_coolaccordion/core".

Thanks

I am running a smart addons module called "Sj Vm Extra Slider" , which gives the same error on virtuemart when published.

vmError: getProductPrices no object given query time

Is there an over ride or something available to help with this error ?

Hi chris Ham,

Please open the vmextrasliderreader.php file in
"your_site/module/mod_sj_vm_extraslider/core", finding:

price.virtuemart_product_price_id,

change to:

price.virtuemart_product_price_id,

price.product_price,

```
$product->prices = $calculator->getProductPrices($product->id);
```

change to:

```
$product->prices = $calculator->getProductPrices($product);
```

Thanks

Same here!

Using SJ Restaurant as a template - any SJ-virtuemart module results in error:

vmError: getProductPrices no object given query time

We are using VM 2.0.8e (the current version) and have tried the following modules with SJ Restaurant: Sj Virtuemart, Sj Mega Products, SJ VM minicart. The problem always appears to be the same. It's not just a warning message, but makes proper use of VM impossible.

Problem disappears once the modules are unpublished.

Should we change

price.virtuemart_product_price_id,

price.product_price,

in all SJ Virtuemart modules???

We are hoping for a quick solution, as we would like to keep the template! 🙏

Hi Carol Bochmann,

You can do the same things to all sj virtuemart modules on the virtuemart component 2.0.8

price.virtuemart_product_price_id,

change to:

price.virtuemart_product_price_id,

price.product_price,

\$product->prices = \$calculator->getProductPrices(\$product->id);

change to:

\$product->prices = \$calculator->getProductPrices(\$product);

Thanks
