

[SOLVED] Disable Mobile Layout ect.

Posted by Michael Halvemaan - 02 Aug 2012 01:17

Hi,

I want to disable the mobile, iphone ect. layout so when you look the website on a mobile phone or else it looks the same as you open it on a computer. I set all the layouts the same, so the window layout has the same as the iphone layout but I doesn't get the same layout on a mobile phone.

How do I disable the layouts so the website looks the same on all platforms?

Thanks!

Hi Michael Halvemaan,

Please open the **yt_template.class.php** in "your_site/templates/sj_news25/includes", finding:

```
if($this->mobile_device_detect()){
    $this->is_mobile = true;
    if($this->get_cookie($this->template.'_switch_modes')!=""){
        if($this->getParam('switch_modes')==1){
            $this->is_mobile = true;
        }else{
            $this->is_mobile = false;
        }
    }
}
else{
    $this->is_mobile = false;
    if($this->getParam('switch_modes')==1){
        $this->is_mobile = true;
    }
}
```

change to:

```
        $this->is_mobile = false;
    } if($this->getParam('switch_modes')==1){
    } $this->is_mobile = true;
    }
```

Thanks
