

Failed to parse time string (jerror) at position 0

Posted by olivier diagnet - 27 Oct 2012 03:05

Hello

Installing the template on Joomla 3.0.1, i get this error message

UsingDateTime::__construct(): Failed to parse time string (jerror) at position 0 (j): The timezone could not be found in the database

Here s the error stack below, installation is on a clean, out of the box joomla, no other extension installed. If i just assign another template with yt plugin turned on, i still get the message. If i disable yt plugin, it works, fine. Site works smoothly with any other template

tkc !

Dear olivier diagnet,

Can you please tell me about the version of php and my sql which you use now?

Thanks

Dear olivier diagnet,

Maybe this issue is occurred by the hosting.

Please go to "plugins/system/yt/includes/libs/yt-minify.php", finding:

```
$this->optimizeFolder = $app->getTemplate(true)->params->get('optimizeFolder', 'yt-assets');
```

=>

```
$this->optimizeFolder = $app->getTemplate(true)->params->get('optimizeFolder', 'yt-assets');
```

```
□□
```

```
$this->optimizeFolder = JPATH_ROOT.'/'. $this->optimizeFolder;
```

Thanks

same problem here ... like that: 0 - DateTime::__construct(): Failed to parse time string (jerror) at position 0 (j): The timezone could not be found in the database. I have implemented jevents and suddanly there was this error with another template working OK

Dear peetee,

Please try to the mentioned guide again.

Thanks

I have 2 sites with nearly...same sites (just for testing) I have created the second one because of the problem mentioned above... Then I had same problem even with the clone site ...On this one I have applied your solution .. for the moment it is working fine. The second (the original one) site looks like ... see atachment, please. Thank You in advance for your effort. Petr
