

Failure after installing sj_joomla3 and YT Plugin

Posted by Juergen - 24 Oct 2012 00:28

Hi.. I have a problem.

Clean install of Joomla 3.0.1. Standard template works well.

Then I want to install your template sj_joomla3 incl. YT-Plugin

Then I activate the YT-Plugin. After this Joomla has a problem.

When I try to open the page, it says

Failure 0, DateTime::__construct(): Failed to parse time string (jerror) at position 0 (j): The timezone could not be found in the database

Timezone in the configuration is set to my timezone.

When I deinstall the YT-Plugin and the template, everything works well.

System:

own VServer

Debian 6, Apache 2.2.16

PHP Version 5.3.3-7+squeeze14

PHP Interface: cgi-fcgi

Database: 5.1.63-0+squeeze1

All folders are writeable..

Do you have a hint for me?

Edit:

Puhh.. sorry "News and Announcements" looks wrong, maybe someone can change this

Dear Juergen,

I have just check sj_joomla3 template on Joomla3.0.1.

It is normal now.

Please check your time zone again.

Thanks

Hello

I ve just posted in the sj_joomla3 section, i get exactly the same problem, it does not seem to be really related to the timezone, but more to the date format, you ll see the error stack in my post

I don't found a solution until yet.

I tried the Template with the quick start installaton (which can be downloaded here)

With this it works, but I'm not a member, so I can't log in after installation.

The documentation how to use is only for members. I'm shortly thought about installing the quickstart installation and resetting the password over Database. But that isn't how this should be used (I think). So I haven't done it.

I deinstalled this installation and tried again

Same problem as before. I also tried the original Joomla version (and not the Joomla German which I downloaded from joomlaos.de). Same problem.

So it must be something in the new installed Joomla. The Quickstart Installation works. If you are a member of smartaddons, take this.

Dear Juergen,

Can you please tell me about the version of php and my sql which you use now?

Thanks

System:

own VServer

Debian 6, Apache 2.2.16

PHP Version 5.3.3-7+squeeze14

PHP Interface: cgi-fcgi

Database: 5.1.63-0+squeeze1

All other templates work fine. So it must be a problem with the yt_plugin.

When the yt_plugin is activated and I use another template, it works but on debug line there is also the text "Failure 0, DateTime::__construct(): Failed to parse time string (jerror) at position 0 (j): The timezone could not be found in the database";

When I deactivate the plugin all is fine.
