

The module don't show the images

Posted by jesussuarez - 19 Jul 2011 23:43

I bought this extension few minutes ago, but I don't know if it's useful for me...

The matter is that I need to show (in the front page of my shop), the Categories (With images), and the subcategories (With images too)

The options "Show category thumb image" and "Show sub category thumb image" are marked, but nothing happens in front (The system don't show the images)

Can you explain me if is necessary upload the images as a special way ?

Much thank's

Regards

=====
