

How disable mobile layout Joomla 2.5.7

Posted by jeremyto - 13 Aug 2013 20:19

Hello, i want to disable the mobile layout. Because i don't like it when it's launched on my phone (android and iphone). I want to see this like on the computer.

How ?

Thanks

i'm using Joomla 2.5.7

SJ Esport version 1.0

Dear jeremyto,

SJ eSport is responsive template. If you don't want responsive template, you have to change code so much. Otherwise, our modules is responsive too.

Thanks

When i paid i thought i will have an option to disable it :/

But then i tried to change the code and impossible to find where i can ...

I'm sure there is a solution to make like a computer when it's launched as a mobile.

Please ! ☺

Dear jeremyto,

Please try to go to `templatessj_esportincludeshead.php` and comment 2 code line:

[code]

Thanks for the answer !

I tried and :

- On the mobile phone, it's looks like every module are bellow each others. It's not possible to have the website but in full screen ? and i think it's still a module version, because when i look at the website logo, it's not the same at all of the PC version.

- On PC i had every modules bellow each others too, so i removed the comment of the 2nd line you told me

And now it re-work on PC.

But it's still weird on phone.

Dear jeremyto,

The template hasn't option to disable responsive. We set css of modules for responsive too. So, if you want do that, you have to change css code so much. We will upgrade the template in next time and consider the option in there. Now, we will do that with extra cost.

Thanks
